Experiment-11

Deployment of a Library Book Issue Application Using Zoho Creator Environments

Aim:

To deploy the Library Book Issue application using Zoho Creator environments and verify the accessibility and functionality of the application in the Production environment.

Overview:

Zoho Creator is a low-code application development platform that enables users to create, test, and deploy business applications. Environments help manage application versions during development, testing, and production.

The **Stage environment** is used to test an application before releasing it, while the **Production environment** provides the released application for regular use.

The Library Book Issue application manages student details, book information, issue dates, due dates, and issue status. It includes

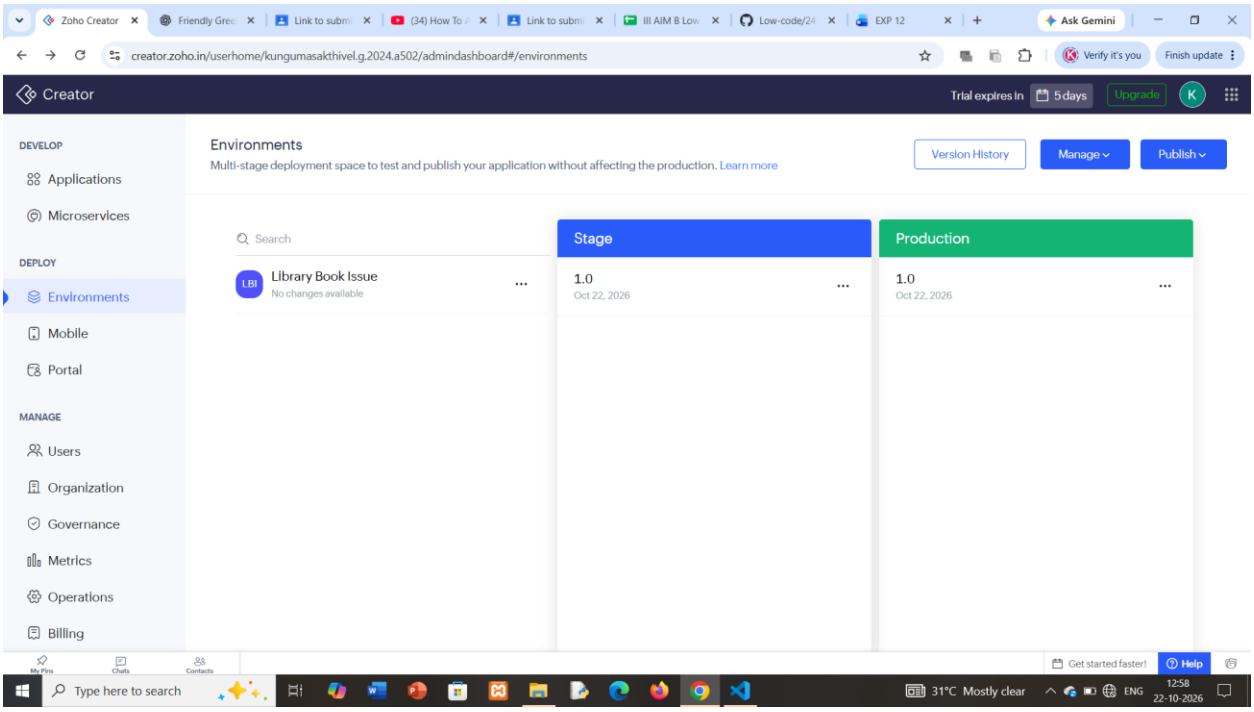

forms for data entry, reports for viewing submitted records, and a dashboard for summarizing library information.

Deploying the application makes it accessible through the configured production environment. Testing the deployed application helps verify that users can submit records and access the available features.

Procedure:

1. Log in to Zoho Creator using the registered account.
2. Open the Library Book Issue application.
3. Navigate to the Environments section in Zoho Creator.
4. Add the Library Book Issue application to the required environment.
5. Review the available Stage and Production versions of the application.
6. Open the Production environment and locate the deployed application version.
7. Select the Access option from the Production version menu to open the application.
8. Open the Library Book Issue form and enter sample student and book details.
9. Submit the form and verify that the record is saved successfully.
10. Open the All Library Book Issues report and check whether the submitted record is displayed.
11. Open the Library Dashboard and verify the visibility and functionality of its components.

12. Confirm that the application is accessible and that the tested features work as expected.

Result:

Thus, the Library Book Issue application was accessed through the Zoho Creator Production environment. A sample record was submitted successfully, demonstrating that the deployed form was functional. The report and dashboard were available for further verification of the application's deployed features.
