Exp-3

Survey report on Emerging Trends in Low Code application development.

Aim:

To study the emerging trends in low code application development and understand how low code platforms are changing the software development process

Introduction:

low code application development allows users to create applications using visual interfaces, drag and drop environment and minimal hand-written code

Emerging tools:

1. AI assisted development:

AI is increasingly used to generate code, workflow and application components

2. Mobile application development:

Low-Code Platforms provides tools for quickly creating responsive mobile application

3. Cloud Based development:

Cloud platform enable applications to be developed, deployed and managed online

4. Workflow automation:

Business uses low-code tool to automate repetitive tasks & business process

5. Integration with API's:

Modern platforms provide easy integration with databases, API's and third party services.

6. Citizen development:

Non-programmers can build simple business application with minimal coding knowledge.

Result:

The emerging tools in low-code app development were surveyed and understood.
